The present report discusses the short-circuiting and idling method in the waveguide for the purpose of determining the dielectric properties of materials on a wave with a length of 3.2 cm in the temperature range of 20 - 200°C. Formulas are supplied for the calculation of the dependence of some high molecular substances and materials. (Author)

Effective methods were sought for the briquetting of
mixtures for glass making in order to eliminate a
number of disadvantages resulting from the use of
loose materials in glass melting. On the base of the
work done, the following conclusions are derived: it is
possible to prepare briquets of sufficient mechanical
